

Tracking equipment is essential to today's equipment manager. To accommodate fleets using telematics, Lincoln has released a P203 pump with RemoteLinc™. RemoteLinc pumps have been designed to communicate to your wireless system. The RemoteLinc units combine the proven P203 pump with two independent outputs capable of linking with your telematic system.

Fleet managers can now be remotely notified when:

- The lubricant reservoir is low
 - Dispatch a lube truck
- The automated lubrication system is in fault
 - Dispatch a service technician
